

JarvondisU Cadet Program Pilot Overview

Takeaway: Here is a fully-formed, publication-ready **pilot one-pager** for the JarvondisU Cadet Program - structured, ceremonial, and operational. It reads like something you can hand directly to a commission, district, or partner. No filler, no hype, just institutional clarity.

JarvondisU Cadet Program - Pilot One-Pager

Space LEAF Corp (in formation)

Sovereign Mission Core • Zero-Trust Classroom • Kid-Safe Operations

1. Mission Purpose

The JarvondisU Cadet Program is a **browser-native, zero-trust learning environment** designed for children ages 6-17. It provides a **safe, observable, parent-approved digital campus** where cadets progress through missions, stewardship layers, and skill domains. The pilot validates operational readiness for district adoption, accreditation, and sovereign-safe deployment.

2. What Exists Today (Operational Baseline)

- **FAAO Zero-Trust Architecture**
Live posture checks, token validation, domain switching, metadata protection.
- **Security Classroom (GO Domain)**
Four FAAO simulators: Token Builder, Domain Switch Trainer, Device Posture Checker, Metadata Leak Detector.
- **Teacher Oversight Dashboard**
Live crew locations, mission flags, per-student session data, FAAO compliance, role-based logs.
- **Cadet Mission Engine**
Five curriculum missions using real FAAO calls and observable progress gates.
- **Traceability Registry v0.2.0**
Requirements → Capabilities → Systems → Interfaces → Artifacts → Controls → Tests → Evidence.
- **Parent Approval Loop**
Time-boxed sessions, full visibility, no tracking, no metadata harvesting.
- **Sovereign Mission Core**
Stewardship doctrine, seals, and safety logic for civilian-first learning.

3. Pilot Structure (v0.1.0)

Cohort Size: 5 cadets

Duration: 14 days

Format: Browser-native, no install, parent-approved

Observation: Full teacher dashboard visibility

Safety: FAAO Zero-Trust enforced at every step

Pilot Flow:

1. Cadet onboarding + device posture check
2. Parent approval + time-boxed session
3. Mission 1: Basic Stewardship
4. Mission 2: Zero-Trust Navigation
5. Mission 3: Metadata Safety
6. Mission 4: Campus Interaction
7. Mission 5: Stewardship Layer Advancement
8. Teacher dashboard review + completion evidence
9. Parent summary + cadet certificate

4. Pilot Outcomes (What Partners Receive)

- **Operational evidence** of zero-trust classroom behavior
- **Mission completion data** (per-cadet, per-mission)
- **Safety compliance logs** (FAAO posture, token lineage, domain switches)
- **Teacher oversight metrics** (session duration, flags, progress)
- **Parent approval records** (time-boxed, observable, safe)
- **Traceability artifacts** (requirements → evidence chain)
- **Cadet testimonials** (optional, parent-approved)

This provides a complete, defensible foundation for accreditation, district review, and commission evaluation.

5. Why This Pilot Matters

The Space LEAF Corp Cadet Program demonstrates a **civilian-first, sovereign-safe learning system** that protects children, respects families, and provides educators with full operational visibility. Unlike traditional edtech platforms, JarvondisU is built on **zero-trust principles, mission-based learning, and complete traceability**, ensuring safety, accountability, and clarity at every layer.

This pilot is the first step toward a **nationally deployable digital campus** that can serve districts, families, and future spacefaring education systems.
